

The screenshot shows the Microsoft Azure portal interface for managing alert rules. The page title is "Alert rules" and it shows a list of two alert rules for the resource "NETW211-VM-TW".

| Name          | Condition                     | Severity    | Target scope  | Target resource type | Signal type  | Status  |
|---------------|-------------------------------|-------------|---------------|----------------------|--------------|---------|
| VM-Deallocate | Category=Administrative, O... | 4 - Verbose | NETW211-VM-TW | Virtual machine      | Activity log | Enabled |
| VM-restart    | Category=Administrative, O... | 4 - Verbose | NETW211-VM-TW | Virtual machine      | Activity log | Enabled |

Setting up  
Alert  
Rules

Within the previously generated Action group, it was time to apply some “Alert Rules” to configure what to notify the admin about. (Status updates). As you can see, I generated two alert rules to log and notify me of both restarts (VM-restart) and Deallocations (VM-Deallocation)
