Topic 1

Good evening class,

Twitter has been in the news quite a bit lately due to its new ownership and its eccentric new owner. However, it may make major headlines here shortly for something much less innocent. Chad Loder, cyber security expert and founder of the security company Habit8, reported on 11/23/22 that Twitter was the victim of a massive security breach and leak that has yet to be widely reported. Twitter was also attacked back in July, which the company did acknowledge, but according to Loder, this leak is not only different formats of data being extracted, but also much larger and much more invasive. Loder goes on to speculate that the information recently compromised could include phone numbers and account information for millions of users, including prominent politicians, celebrities, and other notable users.

Powell, O. (2022, November 25). Twitter accused of covering up Data Breach. Cyber Security Hub. Retrieved November 27, 2022, from <https://www.cshub.com/attacks/news/otw-twitter-accused-of-covering-up-data-breach-that-affects-millions>

Wow, I had absolutely no clue. I certainly don't use twitter as much as of recent as a safeguard for my mental health but perhaps I should look into this breach to see if I had been affected. Great subject selection!
