

Here is a screenshot showing my configuration of my VM's Allow/Deny Rules. I had to enable the VM to be able to receive pings between it's subnets and itself.

The screenshot shows the Microsoft Azure portal interface. The top navigation bar includes the 'Microsoft Azure' logo and a search bar. The left sidebar contains various settings categories, with 'Networking' selected. The main content area displays the configuration for the 'NETW211-VM-TW' virtual machine. Under the 'Networking' section, the 'Inbound port rules' are listed for the network security group 'NETW211-VM-TW-nsg'.

Priority	Name	Port	Protocol	Source	Destination	Action
300	SSH	22	TCP	Any	Any	Allow
310	Allow_ping	Any	ICMP	Any	Any	Allow
65000	AllowVnetInBound	Any	Any	VirtualNetwork	VirtualNetwork	Allow
65001	AllowAzureLoadBalan...	Any	Any	AzureLoadBalancer	Any	Allow
65500	DenyAllInBound	Any	Any	Any	Any	Deny

Configuring an NSG
